## INTRODUCTION

Powerline Equipment Pty Ltd is a designer and manufacturer of a broad range of electrical connectors and associated fittings as used by the electrical supply industry throughout Australia.

The original company commenced operations in 1986 manufacturing a limited range of special purpose tools and connectors. Due to space limitations it was decided in 1994 to rebirth the company and relocate to larger premises in the industrial section of the suburb of Mt. Kuring-gai located on the northern outskirts of Sydney . Connectors and accessories are manufactured in Australia using locally sourced materials thereby enabling full control from raw materials through to the finished product.

Powerline Equipment has the ability to convert an idea for a new item into a product reality. Please allow us to apply our experience to the solution of your next connector or fitting problem.

The following catalogue pages are divided into six sections ;

-  Section 1, Distribution Fittings.
-  Section 2, Substation Fittings.
-  Section 3, Earthing Clamps & fittings.
-  Section 4, Rising Mains Connectors.
-  Section 5, Installation Tools
-  Section 6, Useful Reference Tables.
